
PRESS RELEASE

November 29th 2016

Gram & Juhl are creating jobs and export earnings for Denmark!

Last Friday Gram & Juhl had the pleasure of a visit from a member of the Danish parliament, Jesper Petersen. Jesper Petersen is Spokesman on fiscal affairs, and a member of the Defense Committee, the Environment and Food Committee, and the Fiscal Affairs Committee.

Jesper came in the morning and has breakfast with the employees where different subjects were inverted. After breakfast, Jesper had a tour around the company and was very interested in Gram & Juhl's TCM[®] system and the contribution Gram & Juhl makes not only to promote green energy but also the contribution to the country in form of creating jobs and export earnings for Denmark.

"It was a very good experience to visit Gram & Juhl. They are yet another example on how the green transition can be combined with creating jobs and export earnings for Denmark. I had the pleasure of meeting some very skilled people, and how cool is it that there are a piece of Danish technology in 17,000 turbines in different parts of the world, expanding green energy, and making energy more profitable". – Jesper Petersen

About Gram & Juhl

Gram & Juhl develops and sells certified innovative solutions for monitoring wind turbines. Gram & Juhl is the leading supplier of CMS in the wind industry, having installed thousands of TCM[®] (Turbine Condition Monitoring) systems worldwide.

Gram & Juhl offers a unique solution that maximizes your wind turbines' uptime by early failure detection of costly components such as gearboxes, main bearings or generators.

Our turbine condition monitoring system, TCM[®], provides you with valuable information on the condition of each of your wind turbines. This information allows you to schedule repairs and maintenance when it suits you, thereby helping to drive down your cost of energy
